

South River Technologies and HANDD Business Solutions Announce Partnership

HANDD Business Solutions Chosen as Exclusive Managed File Transfer Partner in the United Kingdom

ANNAPOLIS, MD -- December 14, 2010 -- South River Technologies, Inc. (SRT), an innovator in secure managed file transfer (MFT), announced today a partnership with HANDD Business Solutions. HANDD Business Solutions is a solutions-led consultancy that serves as the only dedicated MFT specialist in the UK. HANDD works with large multi-site enterprises, as well as SMEs, operating across all industry sectors.

HANDD will be the exclusive distributor of SRT's popular Cornerstone Managed File Transfer solution. Cornerstone secures both files and emails while they are being sent or while they are stored. The solution enables customers to choose specific functionality that meets their business needs, and to add capability as their needs grow.

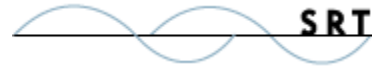

"We are very pleased to be in partnership with South River Technologies and to be launching the Cornerstone MFT into the UK marketplace," says Anthony Hodges, CEO of HANDD Business Solutions. "We really like the fact that Cornerstone MFT has unique functionality such as collaboration and PGP encryption on-the-fly. The platform offers investment protection, versatility and agility as the solution evolves to the customer's changing business requirements."

The partnership will enable SRT to extend the reach of the Cornerstone MFT product in the UK, by having a local partner that can provide value-added services such as pilot implementation management, installation, configuration and on-going support.

"This relationship enables us to provide better service and support for our UK customers," says Michael Ryan, CEO of South River Technologies. "As the need for secure email and file transfer continues to increase in the UK, having a knowledgeable, experienced partner like HANDD means that our UK customers will receive both an excellent product and the benefit of HANDD's expertise in managing a wide variety of MFT projects."

About South River Technologies
